WT-300

High-rigidity multitasking machine equipped with upper and lower turrets and twin opposed spindles. It is a machine equipped with box-way slides for all axes, offering high stability and making it ideal for machining difficult-to-cut and high-hardness materials.

A wide variety of options, peripheral devices, and a full range of software are available to meet a wide variety of needs.

- The Y-axis on the upper turret is available as an option.
- Milling motor 5.5/3.7kW(op.)
Milling spindle speed 6,000min⁻¹
- Tool capacity of up to 48 tools.
- Cycle times are reduced by utilizing simultaneous machining on the L/R spindles with the upper and lower turrets.
- All axes with box-way slides.

One Machine for All Types of Machining

The WT-300 highly rigid multitasking machine has upper and lower turrets and twin opposed spindles that can perform a variety of machining operations depending on the tool to be set. In addition to turning, milling, gearing, and grooving, this machine can also be used for applications that require high rigidity, such as Y-axis parting off. It also has a maximum bar capacity (hole through spindle) of $\phi 102\text{mm}$, allowing machining of all workpiece sizes, from small to large diameters, to be integrated into this ONE machine: The highly rigid and flexible Nakamura-Tome standard machine.

Product	Helical gear
Category	Automotive
Time	2 min. 30 sec.
Material	SCr415
Blank material dimensions	$\phi 72\text{mm}$ bar

Gear Skiving

- Material *SUS303*
- Module *1.25*

I.D. Gear

- Cutter speed *1,200min⁻¹*
- Spindle speed *600min⁻¹*
- Feed *0.1mm/rev*
- Number of teeth *40*
- Tip diameter *$\phi 47.8\text{mm}$*
- Time *2 min 30 sec.*

O.D. Gear

- Cutter speed *1,200min⁻¹*
- Spindle speed *533min⁻¹*
- Feed *0.1mm/rev*
- Number of teeth *45*
- Tip diameter *$\phi 58.45\text{mm}$*
- Time *2 min 46 sec.*

Y-axis Parting off

- Cutting speed *200mm/min*
- Feed *0.3mm/rev*
- Insert width *3mm*
- Material *S45C $\phi 63\text{mm}$*
- Time *6.8sec. (Non-step)*

Turning by Upper turret on L-spindle / Lower turret on R-spindle

Boring by Upper turret on L-spindle / Lower turret on R-spindle

Simultaneous milling by Upper and Lower turret on L-spindle

Milling by Upper turret on R-spindle / Lower turret on L-spindle

Transfer

Simultaneous milling by Upper and Lower turret on R-spindle

All Axes with Box-way Slides Enable Highly Rigid and Stable Machining.

Equipped with Box-way slides on all axes which are traditionally hand scraped by highly skilled technicians, according to our stringent quality control standards.

R-spindle	
Bar capacity $\phi 65\text{mm}$	
Standard	Option
Spindle motor 15/11kW 4,500min ⁻¹	Spindle motor 18.5/15kW 4,500min ⁻¹
Bar capacity $\phi 102\text{mm}$	
Option	Option
Spindle motor 15/11kW 2,500min ⁻¹	Spindle motor 18.5/15kW 2,500min ⁻¹

Machine Bed

Wide Box-way slides on X, Z and Y-axes.
45-degree slant bed structure with high rigidity torque tube and smooth chip discharge.

L-spindle		
Bar capacity $\phi 65\text{mm}$		
Standard	Option	Option
Spindle motor 15/11kW 4,500min ⁻¹	Spindle motor 18.5/15kW 4,500min ⁻¹	Spindle motor 22/18.5kW 4,500min ⁻¹
Bar capacity $\phi 80\text{mm}$		
Option	Option	Option
Spindle motor 15/11kW 3,500min ⁻¹	Spindle motor 18.5/15kW 3,500min ⁻¹	Spindle motor 22/18.5kW 3,500min ⁻¹

L-spindle

Option	Option	Option
Spindle motor 15/11kW 2,500min ⁻¹	Spindle motor 18.5/15kW 2,500min ⁻¹	Spindle motor 22/18.5kW 2,500min ⁻¹

Upper turret	
Standard	
Type of turret head	Dodecagonal
Number of milling stations / Number of indexing positions	12/24
Option	
Milling motor	5.5/3.7kW 3,600min ⁻¹
Option	
Y-axis slide travel	$\pm 60\text{mm}$ (L: $\phi 65, \phi 71$) $\pm 40\text{mm}$ (L: $\phi 80, \phi 102$)

Lower turret	
Standard	
Type of turret head	Dodecagonal
Number of milling stations / Number of indexing positions	12/24
Option	
Milling motor	5.5/3.7kW 3,600min ⁻¹

The Upper and Lower turrets reduce cycle time.

NT SmartX
19 inch touch screen

With a movable operation panel, the angle can now be adjusted by the operator.

Large window for easy viewing of the machining area

The door windows are equipped with wipers that keep the windows clean.

Tool setter(op.)

Can be configured for a detachable, or for an automatic swing-down type tool setter.

Parts catcher type G(op.)

Max. turning length	780mm
Max. turning diameter	$\phi 270\text{mm}$ *L-spindle:$\phi 65, \phi 71$ specifications
Bar capacity	$\phi 65\text{mm}$ (op. $\phi 71, \phi 80, \phi 102\text{mm}$)
Distance between spindles	Max. 1,100mm Min. 250mm

Various Options to Meet
our Customer's Needs.

Oil skimmer

Liquid level detection

Automatic fire extinguisher

High pressure coolant unit

Coolant temperature control unit

Coolant line filter

Signal light

Fire prevention damper

Mist collector

Chip bucket

Chip conveyor (Side/Rear)

Drill breakage detection

Coolant pipe above spindle

Fixed air blow

Internal spindle air/oil blow

Parts catcher type G

Parts catcher type A

Turret air/oil blow

Pneumatic parts ejector

HAN-BEI (in-process measuring system)

Tool setter

And many others.
For items not listed,

- NT Thermo Navigator AI
 - 3D Smart Pro AI

Cut in check

Digital Chuck Interlock

Set the Chuck Open and Close detection position easily.
The chuck open / close position is set up on the NT SmartX screen.
Setup time and machining cycle time are reduced.

One Touch MDI

This function is to register frequently used program blocks or cycles, such as zero return or tool change, and call them again with one touch.

Reduce programming and setup time while eliminating input errors.

NT Smart Sign

Nakamura-Tome IoT software

※Please refer to the NT Smart Sign exclusive catalog for details.

■ Monitoring

Real-Time Monitoring of machine running conditions, in addition to visualizing alarm history and past events.

■ Data Input / Output

Input and output programs, tool data and other machine data from the monitoring PC.

■ Diagnosis

Diagnose problems with the machine servo drives and spindle drives, using a dedicated program.

NT Thermo Navigator AI

Thermal Growth
Compensation using AI.

Compensation model
built using
AI machine learning.

Powered by AI

Time and measured dimension data are input into a dedicated AI Learning software, to build an optimized thermal growth compensation model.

High Precision Thermal Growth Compensation

The compensation value is calculated from acquired data.
The more data is input, the more accurate is the compensation value.

— Pre-correction thermal displacement data
— Thermal displacement data after correction

- ① Time
- ② Measured Dimensions
- ③ Retrieval of Wear Offset Data

Acquired Data
analyzed with
NT Thermo Navigator AI

Feedback

Standard for NT Smart X

3D Smart Pro AI AI analysis NC programming support function

From the 3D CAD drawing, AI automatically analyzes "model geometry", "machining path", "machining tools", "machining conditions", and "machining process sequence", to create NC programs for all processes from raw material to finished product.

3 useful features available with 3D Smart Pro AI

2. Optimization of machining processes

In addition to defining the required machining processes, AI proposes a suitable machining process sequence.

1. Transfer setting

Once the transfer position is set, the machining area and transfer program are created.

3. Tolerance setting

Once the tolerance value is input, the target value for machining can be set.

NT WORK NAVIGATOR

No fixtures required

Machining parts with non-round shapes, such as forgings or castings require that the raw part coordinates be recognized by the CNC control.

It works just by touching the part with a simple inexpensive probe (mostly a round bar mounted on a tool holder) and using the torque control feature of the servo-motor, which is to record required coordinates in the CNC.

The NT WORK NAVIGATOR is eliminating the need for positioning fixtures and special clamping devices.

▲Video

Double safety features for maximum protection

NT Machine Simulation / NT Collision Guard + Airbag (Overload detection)

The machine comes protected with dual safety features: "NT Machine Simulation / NT Collision Guard" to prevent a collision beforehand, and the "Airbag Function" minimizes damage to the machine in case of collision.

NT Machine Simulation

Machine collisions are avoidable with Preventive safety technology!
By checking in advance for interference between chucks and tools, or between tools and covers, etc, in addition to checking the machining processes, the risk of a machine collision is drastically reduced, and the machining processes can be optimized.

Simulation is performed while checking the remaining movement amount and modal information.

It is possible to override the settings for rapid and cutting feed individually. Additionally, simulation by process or by single block is possible.

By process
Single feed

Image shown here is of a 2-turret machine

NT Collision Guard

Available in automatic or manual mode. Using the built-in 3D models on the machine, chucks, tools, holders, and parts, machine collisions can be monitored and prevented in real-time during automatic, manual, or jog movements. Even turret indexing is monitored to prevent collisions, drastically reducing collision risks, especially during machine setup.

Image shown here is of a Tool spindle machine

Airbag (Overload detection)

Compared to other machines, Nakamura-Tome machines will not break after the slightest collision. The "Airbag Function" minimizes the damage that may occur during a collision.

If a machine collision occurs, there is good reason to be confident: Airbag !

When the machine collides, there is no reason to panic.

The Airbag (Overload detection) of the machine tool significantly reduces the impact of a collision and protects the machine.

Without Airbag

Machines will not stop immediately. The slide continues to move even after a collision.

With Airbag

Retraction within 0.001 sec

Crash? Within one millisecond after a collision, the servo motor direction is reversed, and the machine stops in EMG mode.

▲Video

* This feature does not mean zero impact

Chatter Celler

Reduce the chatter and vibration by automatically changing the spindle speed up/down continuously during cutting. The function can be easily turned on with the M-code, and the amplitude and frequency can be set arbitrarily.

OFF ON
* It does not guarantee that the function works without chatter and vibration.
* Chatter and vibration reduction depend on the setup and the cutting condition.

NT Manual Guide i (LUCK-BEI II)

A programming guidance system with the ability to generate NC programs (ISO/EIA G-code programs) easily. Processes created in conversational mode can be cut, copied or pasted ensuring flexibility. Additionally, several cycles such as part-transfer cycle, requiring waiting M-codes, are readily made with the "NC program editing support function". The "NC program simulation function" can be used to check created programs by tool-path simulation or solid-model animation.

▲ Process Editing Function
NT Manual Guide i automatically recognizes each process and lists all processes. Operator can easily change and optimize the program by moving processes, copying processes or adding waiting-functions.

▲ Fixed-form sentence function
NT Manual Guide i contains more than 300 types of fixed form sentences. Operator can select these fixed form sentences for the program from a menu screen.

▲ Simulation
Accurate simulation of turning and milling operations using a 3D solid model.

By introducing the "automatic cutting condition setting function", the number of key strokes required to make a program were reduced by 50% reduced, compared with the previous NT-Manual guide version.

Automatic Cutting-Condition Setting Function

By setting the material type and required surface roughness, cutting conditions are automatically generated. These can be also changed depending on customer's experience.

By selecting the material, cutting conditions B are automatically input.

By setting the surface roughness, machining conditions are automatically input

Cutting conditions. End mill

Nakamura-Tome is committed to the environment as an eco-friendly manufacturer.

Power consumption monitoring screen
The monitor, lighting, and servo can be set to automatically turn off from the power saving setting screen. The amount of power consumption and the amount of power reduction by power saving settings are displayed.

● Safety quality specifications

Various interlocks, such safety fences, auto extinguisher devices, and other safety related equipment may be required. These have to be selected during the configuration of the machine.

① Safety devices include electromagnetic door lock, chuck interlock, hydraulic pressure switch, air pressure switch, short circuit breaker and quill interlock. (Door interlock and chuck interlock are standard equipment.)

② In the case of automation, various safety fences may be required, such as work stocker safety fences, robot safety fences, etc.

During the configuration of machine specifications, please discuss these requirements with the Nakamura-Tome machine sales representative.

● Precautions on the use of cutting fluids and lubricating oils

Some types of cutting fluids (coolant) are harmful to machine components, causing damages such as peeling of paint, cracking of resin, expansion of rubber, corrosion, and rust build-up on aluminum and copper.

To avoid causing damage to the machine, never use synthetic coolants, or any coolants containing chlorine. In addition, never use coolants and lubricating oils which contain organic solvents such as butane, pentane, hexane, and octane.

■ Items
